

Plug 'n' Play with Ray

Tired of spending time and money on add-ons and complicated installations? Our new mobile computer will get your IT investment up and running in no time.

TraffiComTM
Computing solutions for extreme environments

TraffiCom Ray – all inclusive

Visual Indicator

12 inch High Brightness TFT screen with 120 degrees viewing angle, backlight and fully dimmable

Slim design with dimensions only 30,5 x 24 x 5,8 cm

4-wire touch screen

Shock resistance operational 30G at 11ms duration

512 MB RAM

IP65 protection

Weight 3,7 kg

Built-in DC/DC 18-72 V

1 GHz Celeron M processor

Built-in battery backup 15-20 minutes

Intel Extreme 2 integrated graphics controller

4 USB ports

Built in WLAN with CCX-compliant 802.11b/g wireless card

Vibration resistance 5-500 HZ/4.5g RMS for 3 hours, all directions

Built-in Class 1 Bluetooth 2.0+ EDR module

Operating temperature at -30C to +50C

Compact Flash card from 1GB up to 8GB (option)

Ethernet port

Windows XP operating system

Mounting hole pattern according to VESA standard

Meet Ray, the new member of the TraffiCom family of rugged, flexible and ergonomic computers. Despite his slim and light-weight design this forklift mounted computer is sure to give you more than first meets the eye.

A computer built on built-in

Ray comes equipped with built-in standard features that others would charge you extra for. Bluetooth, high speed WLAN, a high resolution touch screen with wide-angle vision, 4 USB ports and an Ethernet port are all included and ready to go. Computing power is supplied with a 1GHz Celeron processor and Ray can be easily integrated to any wireless backbone.

Installation gone easy

Ray's slim design and weight of only 3,7 kilos, together with the practical built-in antennas, makes mounting options almost unlimited. The built-in DC/DC (18-72V) enables easy installation and the battery backup saves time and frustration at shift changes.

LEDing the way to effective operations

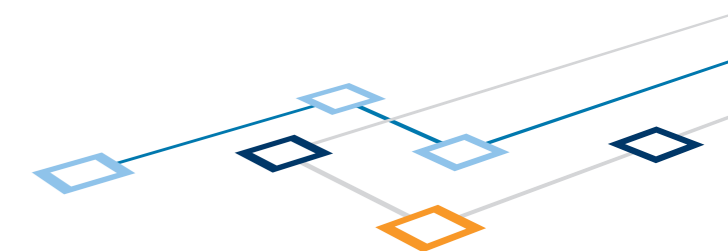

With Ray, saving time and money doesn't stop at easier set-up and installation. Ray is the first forklift mounted computer in the world to feature a LED indicator to help operators in their daily work. The TraffiCom Visual Indicator is placed on top of the screen and can be programmed to guide the user through different tasks.

For example, the LED can be set to flash in response to a successful picking. This lets the operator move on to the next pick without having to return to the terminal, saving valuable time and ensuring picking quality.

Designed for the extreme

Ray is built on a platform based on almost a quarter of a century of experience and designed to stand the toughest of environments. Like his siblings in the TraffiCom product portfolio, Wave and Shark II, Ray is certified according to the Rugged IP65 standard for protection against dust and moisture, and complies with military tests for shock and vibration resistance.

So, if you are looking for a powerful computing solution with less hassle and more value for money we suggest you take a close look at Ray. We are pretty sure you'll like him.

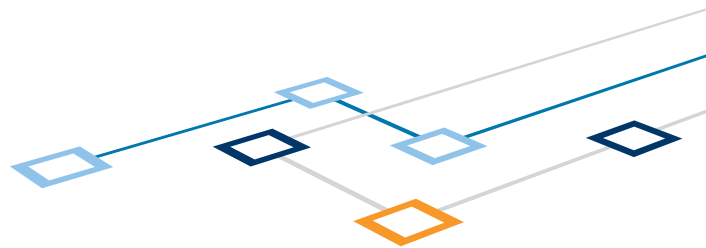

TraffiCom – at your service

We sell our TraffiCom products either directly or through a network of established partnerships with experienced software and hardware providers, third party integrators and consulting companies that enable us to provide best-of-breed solutions for our customers.

We welcome enquiries about our products and will give you the utmost service either directly, or through one of our network of professional partners who can help you in all areas of our product sales and integration.

Let TraffiCom's rugged computers and accessories unleash the potential of your business.
